

ColourPrint Crystal

Transparent Printable Material

ColourPrint Crystal is a transparent material specifically for solvent, eco solvent and thermoresin based inks for printing and cutting systems. This is a very thin material and is suitable for light coloured fabrics without silicon treatment.

Application Instructions

- 1 Print in reverse and cut**
- 2 Let print to dry for at least 12 hours**
- 3 Weed the material**
- 4 Heat apply with its own polyester backing**
- 5 Remove backing once cold**

Due to the many different base materials available on the market, the following heat transfer instructions are given as guideline only:

Temperature: 160-165°C

Pressure: Low/Medium

Time: 15 sec.

Washable to: 50°C

These are the manufacturers guidelines but we have found that it is preferable to leave the polyester backing for the whole application.
