

ColourPrint Evolution

New Soft & Stretchy Printable Material

ColourPrint Evolution is a printable flex specially developed for solvent, eco-solvent based inks for printing and cutting systems. It is a high opacity thin material, incredibly soft to the touch and stretchy and comes with a polyester backing. It is suitable for textiles such as cotton, polyester, lycra and non coated fabrics.

Application Instructions

- 1 Print and cut the material**
- 2 Can be applied immediately due to FAST DRYING PROPERTIES - no need to wait**
- 3 Weed and remove the image from backing with a heat resistant application tape. (recommend using siser TTD)**
- 4 Heat apply following the condition below**
- 5 Remove application tape once cold**
- 6 Do not stretch immediately after application**

Due to the many different base materials available on the market, the following heat transfer instructions are given as guideline only:

Temperature: 150°C
Pressure: Medium/High

Time: 15 sec.
Washable to: 40°C

These are the manufacturers guidelines but we have found that it is preferable to leave the polyester backing for the whole application.
