

PRINTABLES

OMEGA-SKINZ launches the unique series of Printables.

A special range of printable films developed for wrapping passenger cars, commercial vehicles, motorbikes, boats, etc.

Make the most beautiful creations

The Omega-Skinz printables have a uniquely beautiful ink absorption, which creates more colour depth. Colours are more outspoken and your design gets a big 'wow' factor. The metallic pigments in the film remain visible through the print, giving the print a high-class look instead of a normal 'sticker effect'.

Use Omega-Skinz Printables for any print job; whether it is a special design or just a commercial print on a company vehicle. Success is guaranteed.

Create your own wrap colours

Are you looking for a special colour of wrap film that does not exist? No problem at all. Just create your own colour!

Use OS-502 Silver Spirit to create metallic effect colours. If you want to create deep and fresh colours, use OS-501 Pearl of Wisdom.

Now just choose the right laminate from the Omega-Skinz range and there you go, your own colour is a reality.

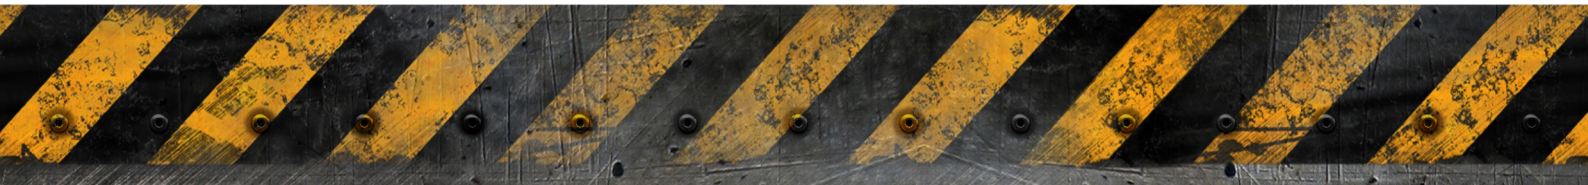

Reinforce your wrap with the right laminate

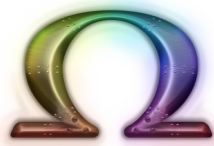

Omega-Skinz Printables has a range of laminates that can give a special effect to the print and the vehicle.

Do you want to accentuate the contours and shapes of a vehicle, or imitate the effect of matt car paint? Then use the OS-510 laminate. If you want an extremely high gloss effect, where slight scratches disappear automatically, use OS-513 Polished Pleasure. If a design needs to be completely matt, OS-511 Silky Satisfaction is the right choice.

Printify Your Wrap

PRINTABLES

Some USPs of the OMEGA-SKINZ Printables

- The metallic and pearlescent particles in the white print film create a luxurious effect.
- The prints are much deeper in colour and start to 'sparkle' when exposed to sunlight.
- Colours and images come more 'to life'.
- Good printing properties, allowing very detailed images to be seen.
- The shapes of a vehicle are shown off to their best advantage as shadow, light and depth of colour in the film accentuate the contours.
- The silver print film gives a metallic effect to every print.
