Ω OMEGA SKINZ

Ω OMEGA SKINΖ

Introducing Omega-Skinz - a high-quality cast PVC wrap series that utilises Grafixp's leading ICS adhesive channel system for easy application. along with a high-quality product suitable for various uses, including long term indoor use, mid-term outdoor applications.

UNIQUE FEATURES

- 100 - 140 microns (dependent on colour)
- Repositionable adhesive with invisible air channels
- Gloss, matt, metallic, pearl and satin finish
- Up to 5 years of outdoor durability
- Conformable film suitable for indents, corrugated surfaces and rivets

APPLICATIONS

AUTOMOTIVE

- Car wrapping
- Fleet marking
- Accent designing
- Striping
- Dechroming

SIGNMAKING

- Lettering
- Fleetmarking
- Digital Printing (UV on Latex)

INDUSTRIAL/ OEM

- Excavators, cranes, etc.
- Containers
- Trains, wagons
- Refrigeration equipment
- Kitchens, furniture etc.
- Small and large machines

NAUTICA**

- Boat wrapping
- Yacht wrapping
- Jetskis

**Attention: Surface always need to be smooth and can be made of glass or painted metal.

WHAT IS OMEGA-SKINZ?

Omega-Skinz is a very soft flexible self-adhesive cast film that is 3D deformable with heat. Omega-Skinz deforms very easily in both concave and over convex surfaces, such as bulges and corners, kinks and indents of vehicles.

MULTI-CAST SYSTEM

Omega-Skinz is produced according to the reusable casting principle. In this case, the film is placed back in the machine after casting, in order to obtain a second casting layer.

MORE COLOUR DEPTH

In this way we achieve extra colour depth and appearance. In addition, the film is less susceptible to overstretching when mounting onto large surfaces.

EASILY DEFORMABLE WITH HEAT

Ideal on boats and superyachts, because the film is more stable. When the film is heated to 40-50 degrees Celsius, it is as soft as butter.

IMPROVED FEATURES

Omega-Skinz does not shrink, it has a long life and is designed for outdoor applications on smooth substrates, such as automotive and 2K paints, gel coatings, glass, etc.

HOW DID OMEGA-SKINZ BEGIN?

The Joint venture between SOTT and Graityp

SOTT is known for its expertise, practical knowledge, innovativeness, marketing skills and creativity. Since 2008 they have been developing special effect films themselves. SOTT does not have its own manufacturing facility, but has its products made at renowned factories such as Graityp.

In 2020 SOTT approached Graityp with a very special and ambitious plan. A plan for the future that would turn the entire wrapping industry upside down. Everything had to be different. Out of the box thinking towards distributors, wrappers and customers would have to be elementary.

The result is that two unique companies, each with their own skills, have entered into a joint venture to make the perfect product. Graityp is responsible for production and quality, while SOTT Colourbrain (the creative department) is responsible for development, marketing, trends and colours. Both have their own distribution channels but they support each other with sales and service.

CONSTRUCTION

OMEGA-SKINZ™ wrapping film is built up in a different way than many conventional films. OMEGA-SKINZ consists of several layers that absorb the film tensions during stretching and deforming. The upper layer is a transparent PVC film, which gives the film extra colour depth. OMEGA-SKINZ wrapping film is cast as a 2-pass or 3-pass system, eventually turning the various layers into one homogeneous layer.

The result is a strong stable film during application, which is extremely soft and flexible when heated with a heat gun or infrared lamp. Both characteristics are ideal for large surfaces as well as complex shapes, such as bumpers, spoilers and door handles.
